

# ASI/TS Record/Play Card

## Overview

ASI/TS Record/Play Card is a PCI record and play card, meeting with MPEG-II/DVB standard and providing a complete API interface, which make is an ideal hardware development platform for digital TV equipment. It is mainly used for sending transporting stream data stored in computer hardware in specific bit-rate, and it can be used as well as digital TV stream generator.

## Features

- ◆ Integrated record and play, convenient and practical
- ◆ Automatic calculation of bit-rate, manually set play bit-rate
- ◆ 8M bytes of super high-speed buffer memory to ensure the stability of high bit-rate output
- ◆ Support secondary development

## Technical Specification

<b>PCI Interface</b>		3/5V voltage compatible standard
<b>ASI</b>		2xBNC interface (1xinput, 1xoutput)
<b>General</b>	<b>Temperature Range</b>	0~45°C (Operation); -20~80°C (Storage)
<b>Features</b>	<b>Power</b>	100-240VAC, 50Hz, 25W
