

PCI TS Play Card

Overview

This card is a PCI play card, meeting with MPEG-II/DVB standard and providing a complete API interface, which make is an ideal hardware development platform for digital TV equipment. It is mainly used for sending transporting stream data stored in computer hardware in specific code rate, and it can be used as well as digital TV stream generator.

Features

- ◆ Convenient and practical
- ◆ Automatic calculation from the stream rate, and also can manually set play code rate
- ◆ Onboard 8M bytes of super high-speed buffer memory to ensure the stability of high bit-rate output
- ◆ Support secondary development

Technical Specification

| | | |
|-------------------------|--------------------------|--|
| PCI | | 3/5V Voltage compatible standard |
| ASI | | 1×ASI (output) |
| General Features | Temperature Range | 0~45°C (Operation); -20~80°C (Storage) |
| | Power | 100-240VAC, 50Hz, 25W |
